PROFESSIONAL LAWN AND TREE CARE

## WORKING TOGETHER FOR A LAWN THAT'S MORE THAN BEAUTIFUL

**COMBINATION CARE LAWN PROGRAM** - This program combines aspects of our regular, IPM based lawn program and our OCP organic program. It is a great way to begin a transition toward a full organic program. Visits will be scheduled every 6-8 weeks, and will include certain preventative controls to help with the control of weeds and insects, including white grubs. An outline of this program is listed below:

**ROUND 1** - SPRING TREATMENT (mid March – mid May)

Includes balanced fertilizer and pre-emergent control for annual grassy weeds. Broadleaf weed control is included once they become active.

**ROUND 2** - LATE SPRING/EARLY SUMMER TREATMENT (mid May – early July)

Includes balanced, time-released fertilizer, surface insect control and broadleaf weed control (weather permitting). After June 1, preventative grub control is included.

**ROUND 3** - MID SUMMER TREATMENT (early July – late August)

Includes balanced, time-released fertilizer with preventative grub control for those customers who received round 2 prior to June 1. All others would receive an application of organic fertilizer.

**ROUND 4** - LATE SUMMER / EARLY FALL TREATMENT (late August – late September)

Includes balanced, organic fertilizer.

**ROUND 5** - FALL TREATMENT

Balanced, organic fertilizer.

You would have the option of miscellaneous weed and/or insect control should a problem arise during the late summer into fall. Additional charges for these may be required.

**SUPPLEMENTAL SERVICES** - These optional services are offered to supplement the regular program as well as address any special problems in the lawn. They are priced separately and require customer approval.

**CORE AERATION** – A mechanical process that involves removing cores of soil from the lawn. Cores are broken up with subsequent mowing. This helps to reduce thatch build up and soil compaction. It also encourages clumpy turf to fill in with new growth.

**SOLU-CAL® TREATMENT** – This will help to neutralize soil acidity to increase nutrient availability and increase fertilizer response in turfgrass.

**SUPRSOIL® LIQUID SOIL CONDITIONER** – an organic, liquid aeration compound. This product contains 11 different types of bio-degradable polymers, which will work their way through 100% of the soil profile. This will help reduce soil compaction more effectively than mechanical aeration alone. As a result, your soil will be better conditioned to absorb nutrients and will have better drainage capacity.

**DISEASE CONTROL TREATMENTS** – Lawn diseases originate in the soil and flare up when conditions are favorable. While fertilizer and adjustments in mowing/watering may help, control treatments may be needed to aid in the control of more severe outbreaks.

**TREE & SHRUB CARE** - We also offer a comprehensive ornamental care program, which includes fertilization, insect and disease protection, along with other specialized treatments.
